Ajeditsdb

Ajeditsdb Freelancer Online Business

Introduction: For my final project, I want to create a database representing the clients I did video editing for on fiverr as a freelancing online business:

Ajedits26 is a freelancing video editing online business hosted on fiverr, and it offers viral short-form and long-form edits with clean animations and motion graphics. The software I use to edit every project is called Davinci Resolve. A client clicks on my gig page and views the description, chooses a pricing package ranging from Basic, Standard, Premium, they can look at reviews from previous clients, and can browse sample projects. Clients will send a message to the seller to discuss requirements or ask about my skills, click order now, provide detailed project instructions/deadlines, and remain in real-time constant contact with sellers to track work progress.

Create DB for Final Project: ajeditsdb

```
postgres=# CREATE DATABASE ajeditsdb;
CREATE DATABASE
postgres=# \c ajeditsdb
You are now connected to database "ajeditsdb" as user "postgres".
ajeditsdb=# |
```

- The client makes an account and joins fiverr
- The client searches a digital service and chooses a freelancer
- Then a client can choose a freelancer to complete a service for them
- The client can choose a package that have different price ranges depending on how big the job is
- Then the client can place an order for the specified package of the service

- They can use their payment method of choice, and remain in constant contact with the freelancer through real-time messages
 - Then the client can leave a review for the freelancer based on how good a job they did or whether they weren't satisfied by the job
-

```
CREATE TABLE clients(  
    client_id SERIAL PRIMARY KEY,  
    fname VARCHAR(50) NOT NULL,  
    lname VARCHAR(50) NOT NULL,  
    email VARCHAR(100) UNIQUE NOT NULL,  
    join_date DATE DEFAULT CURRENT_DATE  
);
```

```
CREATE TABLE freelancer(  
    freelancer_id SERIAL PRIMARY KEY,  
    name VARCHAR(100) NOT NULL,  
    skill_level VARCHAR(50),
